RFQ #090096 Questions and Responses for the Big Lake Creek Design Project

Deadline for Written questions: 12 PM November 12, 2008

1) How should temperatures be checked?

Response:

Field check temperatures at the flow measuring locations with a handheld stream thermometer.

2) How many pebble counts are required?

Response:

Six pebble counts, each year for the reach.

3) Will we have to consider water rights in plan?

Response:

Yes, under Montana law the landowners have the right to divert water for the beneficial use of growing forage for their cattle. Participation in conservation actions does not change that fact.
